PROFESSIONAL SUMMARY

ISTQB Certified (CTFL v4.0) Software QA Engineer with hands-on experience testing web, Android, iOS/iPadOS, API, backend, and embedded BI applications across Banking, Capital Markets, Automotive, and FMCG domains. Experienced in functional, integration, regression, smoke, SIT, UAT, and release validation, with API and backend investigation using Postman and network log analysis. Applies SQL and Python/Pandas to database and large-scale data validation, and maintains automated regression suites in Playwright (JavaScript), Tricentis Tosca, and Katalon/Groovy while collaborating with Developers, Business Analysts, and Product teams across Agile delivery.

TECHNICAL SKILLS

Testing & QA: Functional Testing, End-to-End Testing, Integration Testing, Regression Testing, Smoke & Sanity Testing, SIT, UAT, Release Validation, Test Case Design, Defect Management, Root Cause Investigation, Agile Scrum, SDLC, STLC

Web & Mobile: Cross-Browser Web Testing, Android, iOS/iPadOS, Cross-Device & Responsive Testing, Embedded Power BI Testing

API & Backend: REST API Testing, Postman, JSON & HTTP Response Validation, Authentication/Authorization Testing, Network Log Analysis, JMeter (basic)

Test Automation: Playwright (JavaScript), Tricentis Tosca, Katalon Studio (Groovy), Selenium, Gherkin/BDD

Database & Data: SQL, Python/Pandas, Schema & Row-Level Validation, Data Reconciliation, ETL/Migration Testing, Google BigQuery, Microsoft Fabric, Cloudera (Impala/Hive)

Programming & Tools: JavaScript, TypeScript, Python, Java, Groovy, Git, Jira

PROFESSIONAL EXPERIENCE

Product Quality Assurance - PT Astra International Tbk

Apr 2026 - Present

- Executed functional, integration, regression, smoke, SIT, UAT, and release validation testing for Auto Intelligence, an enterprise sales analytics application with embedded Power BI reports, across Web, Android, iOS, and iPadOS in DEV, STG, and Prod-like environments.
- Designed and executed 200+ positive, negative, boundary, and cross-device test cases covering authentication and authorization, report navigation and switching, global and hierarchical slicers across a Region/Area/Branch hierarchy, filter and state persistence, fullscreen and screen-rotation behavior, and responsive rendering on 15+ embedded dashboards.
- Investigated API and backend dependency issues using Postman, HTTP request/response inspection, and network log analysis, isolating authorization failures, service exceptions, and report-loading defects, then verifying fixes through re-testing.
- Documented and tracked 35+ defects in Jira with reproduction steps, expected and actual results, environment, device, application version, and supporting evidence; drove defect confirmation and release validation across 3 release cycles with Developers, Business Analysts, and vendors.
- Maintained and troubleshooted 40+ Playwright JavaScript regression scripts, investigating flaky failures and updating locators, test data, and flows as the application changed.
- Validated 100+ enterprise datasets across five business units during a Microsoft Fabric and Cloudera (Impala/Hive) to Google BigQuery migration, comparing row counts, schema and data type mapping, nulls, duplicates, business keys, and numeric, datetime, and timezone precision through SQL reconciliation and Python/Pandas automation, achieving 99.8% row-level hash match across partitioned datasets exceeding one billion rows.

Quality Assurance Intern - PT IDX Solusi Teknologi Informasi

Dec 2025 - Apr 2026

- Authored and executed 80+ functional and regression test cases for IDX Terminal and HRIS, deriving positive and negative scenarios from functional requirements and maintaining traceability to test scenarios.
- Groomed PRDs with Developers, Business Analysts, and UI/UX Designers to surface ambiguous and redundant requirements before development; validated six functional defects through re-testing, regression, and UAT.

Quality Assurance Intern - PT Indivara Group

Nov 2025 - Dec 2025

- Designed and executed 100+ functional and regression test cases across Bersama App (Android), Bersama Web Monitoring (CMS), and Victory Web (Salesforce), identifying 7 critical defects pre-production.
- Tracked 20+ defects through the full lifecycle in Jira using Gherkin-based acceptance criteria, collaborating with Product Owners, Developers, and DevOps Engineers across 4 Agile sprints.

Business Support QA & Testing Intern - PT Bank Tabungan Negara (Persero) Tbk

Jun 2024 - Aug 2024

- Created and executed 60+ API and regression test cases for a Corporate Internet Banking platform, validating backend services and business rules across 10+ transaction types.
- Built and maintained 25+ Tricentis Tosca automation modules supporting recurring regression cycles for transaction workflows.

PROJECTS

Invoice Management API Automation - Katalon Studio, Groovy, REST API: Developed an automated API validation suite for authentication, invoice listing, invoice detail, and unbilled summary endpoints, with positive and negative scenarios for HTTP status codes, JSON payloads, required and null fields, date formats, and amount business rules. Implemented reusable request and retry handling through Custom Keywords, and delivered a bug report and workflow documentation.

EDUCATION & CERTIFICATIONS

Bachelor of Information Systems - Telkom University | GPA: 3.68/4.00

Sep 2021 - Aug 2025

ISTQB Certified Tester Foundation Level (CTFL) v4.0 · Associate Data Scientist (BNSP) · Languages: Indonesian (Native), English (Professional Working)
